Software Tester Internship

Dynamic Credit is an investment management and advisory firm specializing in mortgages, loan portfolios, structured credit, derivatives, illiquid assets and software analytics. Founded in 2003, Dynamic Credit has offices in New York and Amsterdam.

Internship Opportunities at Dynamic Credit, Amsterdam office

Dynamic Credit is looking for interns for the Amsterdam office to join our development team as a functional software tester. The functional software tester is a member of the software development and testing team and completes unit, process, function, integration, acceptance and system level software testing.

We are looking for someone who embraces change, collaborates well with both technical and business people, and understands the concept of using tests to document requirements and drive development.

The intern can choose between a normal and a graduation internship. The graduation internship requires that the thesis subject is relevant for the activities of Dynamic Credit and that the student focuses on the abovementioned projects for at least 50% of the internship period.

Responsibilities of the intern include:

• Develop a test strategy based on the project requirements and schedule.
• Design, develop, and execute detail oriented test scripts and test cases using test plans and project specifications.
• Report defects found in testing diligently, promptly, and accurately, using standard defect tracking tools.
• Report test progress against schedules (planning and execution).
• Provide a test summary report that reflects the quality attributes of the software under test.
• Communicate with development, project management, and customer stakeholders where necessary.
• Perform both new functionality and regression tests; identify, analyze and report issues for follow-up.

Requirements:

• Excellent command of written and spoken English
• Keen attention to detail, an understanding of programming logic, and a passion for quality results are required
• Ability to thrive in a dynamic team environment, to learn new technical skills and tools, and to quickly grasp business/functional needs
• Must be customer-focused in testing approach and be skilled at conveying testing concepts and progress and details of software defects
• Basic understanding of object-oriented programming languages such as C#/Java and relational databases is a plus

Applications package: CV, cover letter, grades list
