Request for loan – Alternative II

In this model, the requests are handled by a clerk who enters the data into a computer. The computer now makes the decision as to whether the loan is approved. The clerk then passes on to another clerk or finishes in dispatching of the loan.

clerk1_usage	
mean =	31.012
variance =	450.260, std dev = 21.219
sum of frequencies	= 60000
min val =	0.000, max val = 100.000

clerk2_usage	
mean =	33.201
variance =	2217.031, std dev = 47.094
sum of frequencies	= 60120
min val =	0.000, max val = 100.000
