

Network-Oriented Modeling: Addressing Complexity in Cognitive, Affective, and Social Interactions

Jan Treur

Table of Contents

Part I Network-Oriented Modeling: Introduction

1 Network-Oriented Modelling and Its Conceptual Foundations

An Introduction	3
1.1 Introduction	3
1.2 Addressing Human Complexity by Separation Assumptions	4
1.3 Addressing Complexity by Interaction in Networks Instead of by Separation	11
1.4 Network-Oriented Modelling	14
1.5 The Dynamic Computational Modelling Perspective	16
1.6 Network-Oriented Modelling Based on Temporal-Causal Networks	18
1.7 Scope of Applicability and Achievements	22
1.8 Overview of the Book	23
References	29

2 A Temporal-Causal Network Modeling Approach

With Biological, Neurological and Social Processes as Inspiration	33
---	----

2.1 Introduction	33
2.2 Modeling Complex Processes by Temporal-Causal Networks	38
2.3 Exploiting Knowledge About Physical and Biological Mechanisms in Modelling	41
2.3.1 Addressing Complexity by Higher Level Models Based on Knowledge from Computer Science	41
2.3.2 Addressing Complexity by Higher Level Models Based on Knowledge from Neuroscience	42
2.4 Conceptual Representation of a Temporal-Causal Network Model	43
2.4.1 Conceptual Representations of a Temporal-Causal Network Model	45
2.4.2 More Specific Examples of Conceptual Representations of Temporal-Causal Network Models	47
2.5 Numerical Representation of a Temporal-Causal Network Model	56
2.5.1 The Systematic Transformation from Conceptual to Numerical Representation	57
2.5.2 Illustration of the Transformation for the Example of Fig. 2.10	62
2.5.3 Illustration of the Modelling Perspective for a Social Contagion Process	64
2.6 Standard Combination Functions	67
2.6.1 Basic Standard Combination Functions	67
2.6.2 Building More Complex Standard Combination Functions	70
2.7 Properties for Combination Functions	75
2.8 Applying Computational Methods to Model Representations	79
2.9 Applicability of the Modelling Perspective	83
2.9.1 The State-Determined System Assumption	83
2.9.2 State-Determined Systems and First-Order Differential Equations	84
2.9.3 State-Determined Systems and Modeling Based on Temporal-Causal Networks	86
2.10 Modelling Adaptive Processes by Adaptive Temporal-Causal Networks	90
2.11 Discussion	97
References	98

Part II Emotions All the Way

3 How Emotions Come in Between Everything

Emotions Serving as Glue in All Mental and Social Processes	103
---	-----

3.1 Introduction	103
3.2 Generating Emotional Responses and Feelings	105
3.3 Emotion Regulation	109
3.4 Interaction Between Cognitive and Affective States	112
3.5 Emotion-Related Valuing in Decision-Making	116
3.6 Emotions and Social Contagion	117
3.7 Discussion	118

4 How Do You Feel Dreaming	
Using Internal Simulation to Generate Emotional Dream Episodes.....	125
4.1 Introduction	125
4.2 Memory Elements, Emotions and Internal Simulation in Dreaming	126
4.3 A Temporal-Causal Network Model Generating Dream Episodes	128
4.4 Simulations of Example Dream Scenarios	133
4.5 Relations to Neurological Theories and Findings	136
4.6 Discussion.....	137
References.....	138

5 Dreaming Your Fear Away	
Fear Extinction Learning During Dreaming	141
5.1 Introduction	141
5.2 An Adaptive Temporal-Causal Network Model for Fear Extinction Learning.....	142
5.2.1 Conceptual Representation of the Adaptive Network Model	142
5.2.2 Numerical Representation of the Adaptive Network Model	146
5.3 Simulations of Fear Extinction Learning in Dream Scenarios	148
5.4 Relating the Adaptive Temporal-Causal Network Model to Neurological Theories	152
5.5 Discussion.....	153
References.....	154

6 Emotions as a Vehicle for Rationality in Decision Making	
Experiencing Emotions for Decisions Based on Experience	157
6.1 Introduction	157
6.2 The Adaptive Temporal-Causal Network Model for Decision Making	159
6.3 Simulation Results for a Deterministic World.....	167
6.4 Simulation Results for a Stochastic World	171
6.5 Simulation Results for a Changing Stochastic World	172
6.6 Evaluating the Adaptive Temporal-Causal Network Model on Rationality	175
6.7 Discussion.....	178
References.....	179

Part III Yourself and the Others

7 From Mirroring to the Emergence of Shared Understanding and Collective Power	
Biological and Computational Perspectives on the Emergence of Social Phenomena.	183
7.1 Introduction	183
7.2 Mirror Neuron Activation and Internal Simulation	185
7.2.1 The Discovery of Mirror Neurons	185
7.2.2 Neurons for Control and Self-other Distinction	186
7.2.3 Generating Emotions and Feelings by Internal Simulation: As-if Body Loops	187
7.2.4 Mirroring Process: Mirror Neuron Activation and Internal Simulation	187
7.2.5 Development of the Discipline Social Neuroscience	193
7.3 The Emergence of Shared Understanding	194
7.3.1 The Emergence of Shared Understanding for External World States	195
7.3.2 The Emergence of Shared Understanding for Internal Mental States	196
7.4 The Emergence of Collective Power.....	198
7.4.1 The Emergence of Collective Action Based on Mirroring	198
7.4.2 The Role of Feelings and Valuing in the Emergence of Collective Action	200
7.5 Integration of External Effects and Internal Processes.....	201
7.6 Abstraction of Complex Internal Temporal-Causal Network Models	202
7.7 Discussion.....	203
References.....	205

8 Am I Going to Do This? Is It Me Who Did This?	
Prior and Retrospective Ownership States for Actions	209
8.1 Introduction	209
8.2 Neurological Background	211
8.3 A Temporal-Causal Network Model for Ownership	213
8.3.1 Conceptual Representation of the Temporal-Causal Network Model	213
8.3.2 Numerical Representation of the Temporal-Causal Network Model	215
8.4 Simulation of Example Scenarios	220
8.4.1 Normal Execution and Attribution of an Action	221
8.4.2 Vetoing a Prepared Action Due to Unsatisfactory Predicted Effect	222
8.4.3 Effects of Poor Prediction; Schizophrenia Case	224
8.4.4 Satisfactory Predicted Effects but Unsatisfactory Actual Effects	225
8.4.5 Mirroring Another Person	226
8.5 Relations to Neurological Findings	227
8.6 Discussion	230
References	231
9 How Empathic Are You	
Displaying and Regulating Different Social Response Patterns	235
9.1 Introduction	235
9.2 Neurological Background	237
9.2.1 Mirror Neurons	237
9.2.2 Control and Self-other Distinction	238
9.2.3 Emotion Integration	239
9.2.4 Enhanced Sensory Processing Sensitivity and Emotion Regulation	239
9.2.5 Empathic Responses	241
9.3 The Temporal-Causal Network Model	243
9.3.1 Conceptual Representation of the Model	243
9.3.2 Numerical Representation of the Temporal-Causal Network Model	247
9.4 Types of Social Response Patterns Shown	252
9.4.1 Overview of Basic Patterns	252
9.4.2 Oscillatory Patterns: Limit Cycle Behaviour	255
9.4.3 Comparison to Empirical Gaze Data	256
9.4.4 Interaction of Two Persons Displaying Regulation of Enhanced Sensory Sensitivity	257
9.5 Learning Social Responses by an Adaptive Temporal-Causal Network Model	259
9.6 Example Simulations of Learning Processes	260
9.7 Discussion	263
References	265
10 Are You with Me? Am I with You?	
Joint Decision Making Processes Involving Emotion-Related Valuing and Mutual Empathic Understanding	271
10.1 Introduction	271
10.2 Mirroring, Internal Simulation and Emotion-Related Valuing	272
10.3 The Temporal-Causal Network Model	274
10.3.1 Conceptual Representation of the Temporal-Causal Network Model	275
10.3.2 Numerical Representation of the Temporal-Causal Network Model	277
10.4 Simulation Results	281
10.5 Discussion	283
References	284
11 Changing Yourself, Changing the Other, or Changing Your Connection	
Integrative Dynamics of States and Interactions in a Social Context	287
11.1 Introduction	287
11.2 Small World Networks and Random Networks	288
11.2.1 Small World Networks	290
11.2.2 Random Networks	290
11.3 Distribution of Node Degrees and Scale-Free Networks	291
11.3.1 Scale-Free Networks	291
11.3.2 Identifying a Power Law	292
11.3.3 Clusters and Bridges	294
11.4 Weak Ties, Strong Ties and Weighted Connections	294
11.5 Different Types of Dynamics in Networks Based on Social Interaction	298
11.6 Social Contagion	301
11.7 Adaptive Network Dynamics and the Homophily Principle	306
11.8 Adaptive Networks and the More Becomes More Principle	313
11.9 Adaptive Networks and Actual Interaction Over Time	315
11.10 Discussion	319
References	320

Part IV Analysis Methods for Temporal-Causal Network Models

12 Where Is This Going

Verification by Mathematical Analysis: Monotonicity, Equilibria, and Limit Cycles.	325
12.1 Introduction	325
12.2 Verifying a Temporal-Causal Network Model by Mathematical Analysis.....	326
12.3 Mathematical Analysis for Equilibrium States: An Example	332
12.4 Mathematical Analysis for Equilibrium States: Scaled Sum Combination Function	335
12.5 Mathematical Analysis for Equilibrium States: Hebbian Learning	338
12.5.1 Analysis of Increase, Decrease or Equilibrium for Hebbian Learning Without Extinction	339
12.5.2 Analysis of Increase, Decrease or Equilibrium for Hebbian Learning with Extinction	340
12.5.3 How Much Activation of Is Needed to Let x Increase?	342
12.6 Mathematical Analysis for Equilibrium States: Homophily Principle.	343
12.7 Mathematical Analysis for Behaviour Ending up in a Limit Cycle Pattern.....	345
12.8 Discussion.....	349
References.....	350

13 What Is Happening

Identifying and Verifying Emergent Patterns.	353
13.1 Introduction	353
13.2 Dynamic Properties and Temporal-Causal Network Models	355
13.2.1 A Temporal-Causal Network Model Describing Local Dynamics and Dynamic Properties Describing Patterns Emerging in Overall Dynamics.....	355
13.2.2 Identifying Emergent Dynamic Properties for a Given Model.....	356
13.2.3 Identifying Dynamic Properties Initially as Requirements for a Model.....	357
13.3 Dynamic Properties Versus Real World Dynamics Validation, Monitoring, and Analysis	358
13.3.1 Validating Dynamic Properties Against Actual Real World Processes.....	359
13.3.2 Validating Dynamic Properties Against Patterns Reported in Literature	360
13.3.3 Monitoring and Analysis of Real World Processes Using Dynamic Properties	360
13.4 Dynamic Properties Versus Model Dynamics: Verification and Personalization	360
13.4.1 Testing, Focusing and Analysis of a Model by Verifying It Against Dynamic Properties	361
13.4.2 Personalizing Characteristics of a Model Based on Dynamic Properties	361
13.4.3 Validation of a Model Based on Validated Dynamic Properties	362
13.5 Conceptual Representations of Dynamic Properties	362
13.6 Numerical-Logical Representations of Dynamic Properties.	367
13.6.1 Numerical Representations of State Relations	368
13.6.2 Using Numerical Representations Within a Dynamic Property Expression	370
13.6.3 Numerical-Logical Representation of a Dynamic Property Expression.....	372
13.7 Types of Dynamic Properties and Their Representations	375
13.7.1 Basic State Relation, Achievement, Grounding, Representation, Ordering and Monotonicity Properties..	375
13.7.2 Maintenance, Peak, Speed, Equilibrium and Limit Cycle Properties	380
13.7.3 State Comparison, Trace Comparison and Trace Selection Properties.....	384
13.8 Examples of Dynamic Properties in Some Case Studies.....	387
13.9 Automatic Checking of Dynamic Properties	391
13.10 Discussion.....	393
References.....	394

14 Who are You

Identifying Characteristics of Persons, Their Networks and Other Contextual Aspects by Parameter Estimation and Validation.....	397
14.1 Introduction	397
14.2 Determining Characteristics and the Use of Requirements	399
14.2.1 The Parameters in a Temporal-Causal Network Model	399
14.2.2 Direct Measuring of Characteristics of a Situation.....	400
14.2.3 Using Requirements to Find Characteristics of a Situation.....	401
14.2.4 Using Error Measures for Requirements	402
14.3 Description of an Example Model	404
14.4 Parameter Tuning by Exhaustive Search.....	407
14.5 Parameter Estimation by Gradient Descent	410
14.6 Parameter Estimation by Random Gradient Descent	414
14.7 Parameter Estimation by Simulated Annealing	416
14.8 Discussion.....	421
References.....	422

Part V Philosophical, Societal and Educational Perspectives

15 We Don't Believe in Ghosts, Do We?

What Is It that Drives Dynamics?	425
15.1 Introduction	425
15.2 Is Motion of Nonliving Entities Driven by Ghosts?	428
15.2.1 Zeno About Arrows that Are Moving and Unmoving	428
15.2.2 Adding Anticipatory State Properties to Describe a State: Potentialities	431
15.3 Is Motion of Living Entities Driven by Ghosts?	432
15.3.1 Mental States Driving Motion	432
15.3.2 Can 'Things of the Soul' Move Objects?	433
15.4 Explaining Changed States by Introducing Potentialities	434
15.4.1 Potentialities and Their Actualisation as a General Perspective on Dynamics	434
15.4.2 Derivatives as Potentialities for Variables in Dynamical Systems	435
15.4.3 What Kind of State Properties Are Potentialities?	436
15.4.4 Summary of Assumptions Underlying Potentialities	437
15.5 Potentialities in Physics	437
15.6 What Kind of Property Is a Potentiality: Getting Rid of Ghosts?	439
15.6.1 Why Velocities and Derivatives by Themselves Are not Genuine State Properties	440
15.6.2 Ghost-like Properties or Temporal Relations Involving Genuine Properties?	442
15.7 Potentialities for Causal Relations and Transition Systems	444
15.7.1 Transition Systems and Causal Relations	444
15.7.2 Potentialities for Transition Systems and Causal Relations	445
15.8 Realisers for Potentialities and the Role of Differential Equations	446
15.8.1 Realisers of Mental States in Philosophy of Mind	446
15.8.2 Realisers of Potentialities from a More General Perspective	447
15.8.3 Realisers for Derivatives: First-Order Differential Equations	448
15.9 How to Explain Changed Potentialities	450
15.9.1 Introducing Higher-Order Potentialities: Potentialities for Potentialities	451
15.9.2 Higher-Order Potentialities in Cognitive Models	452
15.9.3 Mathematical Formalisation of Higher-Order Potentialities in Calculus	452
15.9.4 How to Get Rid of an Infinite Chain of Higher Order Potentialities by Realisers	453
15.10 Changed Potentialities Due to Interaction	454
15.10.1 Exchange of Potentialities by Interaction	454
15.10.2 The Role of Higher-Order Potentialities in the Exchange of Potentialities	456
15.10.3 Higher-Order Potentialities to Characterise Interaction in Physics	457
15.11 Multiple Realisation of Potentialities	459
15.12 State-Determined Systems and Potentialities	461
15.13 Discussion	463
References	465

16 Making Smart Applications Smarter

Societal Applicability of Computational Models	467
16.1 Introduction	467
16.2 Multidisciplinarity: The Ingredients	469
16.3 Combining the Ingredients	469
16.4 Coupled Reflective Systems	471
16.5 Integrative Modelling	472
16.6 Discussion	474
References	475

17 Multidisciplinary Education

Computational Modelling as the Core of a Multidisciplinary Curriculum	477
17.1 Introduction	477
17.2 Overall Structure of the Curriculum	479
17.3 Computational Modelling Stream	481
17.4 The Human Sciences and Exact Sciences Streams	483
17.5 Integration and Projects	484
17.6 Evaluation and Discussion	484
References	487

Part VI Network-Oriented Modelling: Discussion

18 On the Use of Network-Oriented Modelling

A Discussion	491
18.1 Introduction	491
18.2 Network-Oriented Modelling	491
18.3 Genericity of a Network-Oriented Modelling Approach	492
18.4 Applicability of Network-Oriented Modelling	494
18.5 Finally	496
References	496
Index	499
